

Strategic Alternatives — Board Deck (January 2026)

VistaPort Media Inc. — Corporate and Board

Document ID	DR-015
Prepared by / owner	Aaron Klein
Date	8 January 2026
Classification	Strictly Confidential — Project Atlas
Prepared for	Board of Directors — discussion
Counterparty	Northstar

Strategic Alternatives — Board Discussion

Prepared by Corporate Development for the Board of **VistaPort Media Inc.**. This deck summarises the indicative valuation and strategic rationale for a potential combination with Northstar Mobile Holdings plc (“Northstar”), together with alternatives. Strictly confidential; for Board discussion only.

Indicative and illustrative. Figures are unaudited and subject to confirmatory diligence and definitive documentation.

1. Situation

- Northstar has indicated a non-binding interest at an indicative enterprise value of approximately **\$4.83bn**.
- The strategic rationale rests on combining VistaPort’s logged-in audience and advertising technology with a complementary telecoms customer base.
- A competitive process is being prepared to test value, with the data room and management presentation in advanced preparation.

2. Indicative valuation

Metric	Value	Comment
Indicative enterprise value	\$4.83bn	Northstar non-binding indication
FY2025 revenue	\$5.15bn	Unaudited; diversified across products
FY2025 adjusted EBITDA	\$775m	After management add-backs
Implied EV / adj. EBITDA	~6.2x	Indicative multiple

3. Value drivers

- **Scale & engagement:** approximately **615m** monthly active users and 408m mobile MAU underpin the audience proposition.
- **Identity & addressability:** the AtlasID identity graph supports durable first-party addressable advertising as third-party identifiers decline.
- **Ad-tech monetisation:** the LumenX exchange provides a take-rate on large advertising flows with scope for higher-margin first-party data products.
- **Synergies:** estimated synergy NPV of approximately **\$410m** from addressability uplift, cross-sell and cost efficiencies when combined with the Northstar base (see the integration synergy model).

4. Combination thesis

Lever	Description	Indicative contribution
Addressability uplift	Higher match rates from combined first-party data	Majority of synergy NPV
Cross-sell	Advertising and subscription cross-sell to the telecoms base	Meaningful
Cost efficiencies	Infrastructure, procurement and G&A rationalisation	Supportive

5. Indicative timetable

Milestone	Indicative date
Data room opens	8 December 2025
Management presentations	19 January 2026
Indicative (non-binding) offers	13 February 2026
Confirmatory diligence	From 16 February 2026
Signing (target)	10 April 2026

6. Alternatives considered

- **Status quo / continue as independent:** retains optionality but foregoes near-term value crystallisation and synergy capture.
- **Partial disposal / partnership:** narrower value; greater execution complexity.
- **Sale of the operating business (recommended to test):** the Northstar indication provides an attractive starting point to run a competitive process.

7. Key risks and considerations

- Advertising market and macro conditions affecting near-term yield.
- Customer-concentration and renewal timing in the top advertiser cohort.
- Execution and regulatory approvals on any transaction.
- One open workstream (account integrity) is being managed by management and counsel; it is kept under review and is not expected, on current information, to be quantified at this stage.
- Confirmatory diligence may identify items requiring further analysis.

8. Recommendation

Corporate Development recommends that the Board authorise management to progress a competitive process to test the indicative \$4.83bn valuation, while continuing to prepare the data room and maintaining optionality on alternatives. A further update will be brought to the Board following receipt of indicative offers.
