

Advertiser Retention Report — Q4 2025

VistaPort Media Inc. — Commercial and Advertising

Document ID	DR-033
Prepared by / owner	Thomas Vale
Date	14 January 2026
Classification	Strictly Confidential — Project Atlas
Period	Q4 2025
Metric	Net revenue retention 104.8%

Quarterly review of advertiser retention, net revenue retention (NRR) and churn for the global advertising book. Prepared by the Global Advertising commercial operations team for the SVP Global Advertising and the diligence file.

1. Headline retention

Logo retention (rolling 12m)	94.6% of FY2024 advertisers active in Q4 2025
Gross revenue retention	92.1%
Net revenue retention (NRR)	104.8% — healthy; upsell and new logos offset churn
Top-50 concentration	Top 10 advertisers ≈ 45% of advertising revenue

Net revenue retention remained **healthy** at 104.8% for the quarter. Expansion within agency holding groups and growth in retail and travel offset a modest number of non-strategic logo losses. The book remains diversified across verticals and geographies.

2. Retention by vertical

Vertical	Active advertisers	NRR	Commentary
Agency holding groups	112	107%	Expansion in programmatic guaranteed
Retail & grocery	186	106%	Strong seasonal (Q4 peak) demand
Travel	74	103%	Recovery continuing; some Q4 softness
Financial services	91	101%	Regulated; steady, brand-safety sensitive
CPG & beauty	143	104%	Stable
Technology & media	88	102%	Competitive; price-led

3. Churn analysis

Gross churn of 7.9% (revenue) was within the historical 7–9% band. The largest single loss (Solace-adjacent streaming reseller) was a planned exit on margin grounds. No vertical showed structural deterioration. Win-back motions are tracked separately in the win/loss notes (DR-039).

3.1 Client questions on user-trust and targeting pools

A small, time-boxed cluster of client questions arose in November 2025 following the **Trust Reset** credential-hygiene communications (the staged password-reset and session-refresh programme described in product materials). A number of agencies asked whether the *November login-reset noise* had affected logged-in targeting pools or audience segments, and a few raised general *privacy questions*. Two mid-size agency accounts briefly paused incremental bookings pending account-team reassurance.

Account teams, with Customer Success and Legal sign-off on the standard messaging (see DR-042), confirmed that addressable audiences refresh continuously and that no change to contractual data-handling terms had occurred. Activity from the affected accounts had substantially recovered by mid-December. We assess this as

transient and seasonal-adjacent rather than a structural retention risk, and continue to monitor the small number of accounts coded 'Med/High' in the top-50 schedule (DR-032).

Questions clustered in the weeks of 3 and 10 November 2025; coded items are exported to the brand-safety feedback log (DR-043). NRR impact in Q4 was immaterial.

4. Outlook

- NRR expected to remain above 102% into Q1 2026 on a strong pipeline (DR-038).
- Continue proactive outreach to the small number of accounts that queried targeting pools.
- Maintain coordinated messaging with Customer Success and Legal on user-trust questions.
