

Consent Management — Overview

VistaPort Media Inc. — Product Data and Technology

Document ID	DR-053
Prepared by / owner	Grace Okafor
Date	20 November 2025
Classification	Strictly Confidential — Project Atlas
Function	Privacy
Status	Overview

This overview describes how consent and preference signals are captured, stored and honoured across VistaPort properties, and the principal areas of complexity. It is intended as orientation for diligence and not as a legal opinion.

1. Consent architecture

- A central preference and consent service records user choices for advertising, personalisation, analytics and communications.
- Consent strings are propagated to LumenX, AtlasID and personalisation at request time.
- Withdrawal of consent is honoured across properties via the central service.

2. Consent categories

Category	Basis	Withdrawal mechanism
Advertising personalisation	Consent / legitimate interest (region-dependent)	Privacy dashboard; ad settings
Cross-property identity (AtlasID)	Consent	Privacy dashboard
Analytics & measurement	Consent / legitimate interest	Cookie & privacy controls
Marketing communications	Consent	Unsubscribe; preference centre

3. Legacy and pre-2022 accounts

A known area of complexity concerns legacy and pre-2022 accounts. Some of these accounts, whose profile data originated in the legacy account platform, lack a modern, granular consent record because they pre-date the current consent service. For these accounts, consent is inferred from historical settings and, where required, refreshed through re-consent prompts. The migration of remaining legacy accounts onto the modern consent model is in progress as part of platform modernisation.

4. Data-subject requests

Access, deletion and objection requests are handled through a central intake with service-level targets aligned to applicable law. Requests touching legacy data may require additional lookup across the legacy store and its remaining backups during the migration period.

5. Open items

- Complete consent-model migration for remaining pre-2022 accounts.
- Retire historical inference logic once migration completes.
- Align retention of consent evidence with the Data Retention Policy (DR-052).
