

Email Gateway Alert Summary

Email Gateway — Alert Summary (November 2025)

Document ID	DR-076
Prepared by / owner	Nina Petrov
Date	5 December 2025
Classification	Strictly Confidential — Project Atlas
Source	Email security gateway
Period	November 2025

Monthly summary of email-gateway security telemetry for **VistaPort Media Inc.** for November 2025. Figures are drawn from the email security gateway and reflect routine inbound threat-handling. Volumes are within normal ranges for the corporate estate.

1. Headline metrics — November 2025

Metric	Value	vs prior month
Total inbound messages processed	48,210,400	+1.4%
Messages quarantined (spam/graymail)	2,914,330	-0.6%
Phishing URLs blocked	61,470	+3.2%
Malicious attachments blocked	9,180	-2.1%
BEC / impersonation attempts flagged	612	+5.0%
Outbound DLP events	143	+0.0%

2. Notable campaigns

- A credential-harvesting phishing campaign impersonating a payroll provider was blocked; all 4,200 messages quarantined; no user reported credential entry.
- A BEC wave impersonating the CFO was detected and quarantined; finance staff briefed.
- A malware campaign using password-protected archives was intercepted by sandbox detonation.

3. User reporting and response

Indicator	Value
User-reported phishing (via report button)	1,940
Confirmed malicious after triage	511
Median triage time	18 minutes
Accounts auto-protected (precautionary reset)	27

4. Assessment

Email-borne threat activity in November was consistent with prior periods. Controls performed as expected and no gateway control failures were identified. No action beyond business-as-usual tuning is recommended.

Generated from the email security gateway. Routine operational summary; no material items to escalate.
