

SOC 2 Type II Report — 2025 (Summary)

SOC 2 Type II — 2025 (Management Summary)

Document ID	DR-064
Prepared by / owner	Owen Bell
Date	5 October 2025
Classification	Strictly Confidential — Project Atlas
Examination period	1 Oct 2024 – 30 Sep 2025
Opinion	Unqualified (in-scope)

Summary of the independent SOC 2 Type II examination of **VistaPort Media Inc.**'s in-scope services for the period 1 October 2024 to 30 September 2025. The examination addressed the Trust Services Criteria for Security, Availability and Confidentiality. This is a management summary; the full service auditor's report is available under NDA.

1. Opinion

The service auditor issued an **unqualified (clean) opinion** that, in all material respects, controls over the **in-scope** systems were suitably designed and operating effectively to meet the applicable Trust Services Criteria throughout the examination period. No exceptions requiring qualification were noted for the in-scope system boundary.

2. System boundary and scope

The examination scope comprises the current production identity, advertising and communications services and their supporting cloud infrastructure. The scope is defined by the system description prepared by management and agreed with the service auditor.

In scope	Basis
AtlasID identity graph (current)	Core production identity service
VPAuth (current signing/validation path)	Current authentication service
LumenX Ad Exchange	Production advertising platform
VistaMail	Production communications service
Kestrel-hosted production estate (current)	Supporting cloud infrastructure

3. Carve-outs and scope exclusions

Consistent with the agreed system description, certain legacy components in active decommission were **excluded (carved out)** from the examination boundary. The clean opinion above does *not* extend to the carved-out components. Excluded items are managed under the modernisation roadmap and assured through separate internal review.

Carved-out component	Reason for exclusion
legacy_uap (legacy Unified Account Profile store and its backups)	Legacy data store in active decommission; outside current production boundary.
Legacy authentication path (legacy VPAuth session-signing key set)	Superseded signing material pending rotation/retirement under modernisation.
Legacy SSO connectors (pre-2022)	Deprecated federation endpoints scheduled for removal.

4. Complementary controls and reliance

Users of this report should note that the unqualified opinion applies only to the in-scope system boundary described above. Reliance on this report for the carved-out legacy components is not appropriate; those components are addressed separately. Subservice organisations are presented using the carve-out method.

Management summary prepared by the Office of the CISO. The full SOC 2 Type II report, including the complete system description and list of carved-out components, is available to approved reviewers under NDA.
