

Open Source Licence Review

Open-Source Software — Licence Compliance Review

Document ID	DR-090
Prepared by / owner	Hannah Brooks
Date	25 November 2025
Classification	Strictly Confidential — Project Atlas

Open-Source Licence Review. This review summarises open-source software usage across the Company's principal products and identifies a small number of licence-compliance items for remediation. The overall position is sound; the items below are low-cost and low-effort.

Prepared by	Hannah Brooks, Deputy General Counsel
Scope	Principal product codebases and build pipelines
Method	Automated SCA scan plus manual review of flagged components
Overall assessment	Compliant, with minor remediation (see below)

1. Summary of findings

Component	Licence	Product	Issue	Remediation
fastcodec	GPL-2.0	Media transcoding service	Copyleft component statically linked	Replace with permissive alternative or isolate via service boundary
gridcache	LGPL-3.0	Edge caching layer	Dynamic-link obligation; written-offer notice missing	Add written offer & attribution; confirm dynamic linking
tinyparse	GPL-3.0	Internal tooling only	Copyleft in an internal tool (not distributed)	Confirm non-distribution; document internal-use position
zlibext	Zlib	Multiple	Attribution notice incomplete	Update NOTICE file

2. Risk assessment

- No copyleft obligation has triggered any source-disclosure event affecting proprietary code to date.
- The principal item (fastcodec, GPL-2.0) is confined to one service and is straightforward to remediate by component replacement or isolation.
- Estimated remediation effort is modest: a few engineering weeks across the items, with no material cost.

3. Remediation plan

- 1 Replace or isolate the GPL-2.0 component in the transcoding service (target: next quarter).
- 2 Add the missing LGPL written offer and attribution notices.
- 3 Refresh NOTICE files and re-run the SCA scan to confirm closure.
- 4 Add an SCA gate to the build pipeline to prevent regression.

Minor, well-understood compliance items with a clear remediation path and immaterial cost. Maintained by the Office of the General Counsel.
