Classification	Strictly Confidential — Project Atlas
Function	Human Resources
Distribution	Compensation Committee; GC

HUMAN RESOURCES — CONFIDENTIAL MEMORANDUM. This memorandum summarises recent voluntary attrition within the information-security organisation, the principal themes from exit interviews, and the retention and backfill actions in hand. It is provided for diligence in response to a question on senior departures.

To Compensation Committee; Office of the General Counsel
From Sandra Lin, Chief Human Resources Officer
Re Voluntary attrition — Information Security organisation, Q4 FY2025
Date 6 January 2026

1. Summary

Between December 2025 and early January 2026 the security organisation experienced an elevated level of senior voluntary attrition relative to its historical run-rate. The Chief Information Security Officer, Owen Bell, resigned with effect from December 2025, and three senior security engineers gave notice over the following weeks. The departures are concentrated in the authentication and key-management teams. The affected roles are designated key for retention purposes (see DR-094) and are being actively backfilled.

2. Departures

Role	Tenure	Notice given	Effective	Replacement status
Chief Information Security Officer (O. Bell)	5y 4m	Dec 2025	Dec 2025	Interim cover by Head of Security Engineering; external search opened
Principal Security Engineer — Authentication	6y 1m	Dec 2025	Jan 2026	Backfill requisition opened; interim contractor engaged
Staff Security Engineer — Key Management	4y 7m	Dec 2025	Jan 2026	Backfill requisition opened
Senior Security Engineer — Detection & Response	3y 9m	Jan 2026	Feb 2026	Backfill requisition opened

3. Exit-interview themes

Exit interviews were conducted by HR business partners. Themes are summarised below in aggregated, anonymised form consistent with our exit-interview protocol. The most frequently cited themes related to workload, role scope and ways of working; a recurring secondary theme concerned internal alignment on the handling of an operational matter.

- **Workload and on-call burden** during the autumn operational period, including the “Trust Reset” credential-hygiene programme, was the most cited factor.
- **Career progression and scope** following organisational changes.
- **Internal alignment.** Several leavers expressed concerns about how the October account-integrity event was characterised internally, and about the degree of cross-functional alignment between Security, Legal and

Finance on the response. Leavers described a difference of professional judgement rather than any specific allegation.

- **Compensation and external opportunities** in a competitive security-talent market.

The "AURORA" review and the related "Trust Reset" programme were referenced by a minority of leavers as the period during which the alignment concerns arose. HR did not receive any formal grievance, whistleblower report or allegation of wrongdoing through the speak-up channel in connection with these departures.

4. Assessment

HR's assessment is that the attrition reflects a combination of an intense operational period, a competitive external market and individual career decisions, compounded by the uncertainty customarily associated with a sale process. While the concentration of departures in the authentication and key-management teams is notable, we have not identified a systemic people-management issue. The internal-alignment theme is being noted to the General Counsel for awareness; it is a matter of professional judgement on the handling of the October event rather than a conduct concern.

5. Actions in hand

- 1 Interim leadership cover in place; external CISO search initiated.
- 2 Backfill requisitions opened for all four roles; two interim specialists engaged.
- 3 Targeted retention awards extended to remaining senior security engineers under the Key Employee Retention Plan (DR-094).
- 4 Knowledge-transfer plan for authentication and key-management runbooks before effective dates.
- 5 Pulse check of the remaining security organisation scheduled for Q1 FY2026.

Prepared by the Office of the Chief Human Resources Officer. Exit-interview data is aggregated and anonymised. Confidential — Project Atlas — subject to NDA & clean-team protocol.
